

PRESS RELEASE

Falck Renewables: Petralia Sottana and Ty Ru Wind Farms are in operation

Milan, 13 July 2012 - The Petralia Sottana wind farm (Palermo) is now in operation, in line with the 2012-2014 business plan.

The wind farm, which is in final commissioning, consists of 26 turbines supplied by Gamesa, for total installed power of 22.1 MW. The wind farm is connected to the grid and producing energy. It is planned to be operating at full capacity by the end of this month. It is located 100 Km from Enna and is on a north-east ridge, at 700-900 m of altitude. The power plant will produce renewable electric energy, representing the power requirements of approximately 14,000 households.

In addition, Falck Renewables has also completed construction of the Ty Ru wind farm, in Brittany, France, earlier than expected. The wind farm is located near the English Channel (Manche), approximately 1 km far from the Mont d'Arrée. The wind farm is already producing energy and is planned to be operating at full capacity by the end of July. This plant, which consists of 5 Enercon turbines for a total installed power of 10 MW, will produce energy sufficient to meet the power requirements of about 8,000 families.

Piero Manzoni, CEO of Falck Renewables, commented: "With the completion of the wind farms of Petralia Sottana and Ty Ru, we have reached a new milestone that shows Falck Renewables' capabilities and determination to achieve the growth path that it set for itself. However, new regulations in Italy make it far more difficult to develop and construct new plants, that is why our business plan for the next few years calls for the extension of existing renewable energy plants in Italy or for small-size projects, even though in particular cases we may be willing to consider the acquisition of attractive existing assets. Our attention is focused on more attractive markets, such as UK, Poland and potentially other Countries where regulations and the financial system support the development of opportunities".

*With 716 MW installed in Europe, **Falck Renewables S.p.A.** – a Company of the Falck Group listed on the STAR segment of the Italian Stock Exchange (trading code FKR.MI) – is a constituent of the Nasdaq Omx Global Wind Energy Clean Edge Index and the MCSI Global Small Cap Index. Falck Renewables develops, plans, builds and manages plants for the production of energy from renewable sources, with the mission to meet the population's energy requirements on the basis of a specific industrial integration plan, based on differentiation by production technology and by geographical area. Thanks to this strategy, the Company is flexible in the allocation of investments, with the objective to mitigate risks and to take advantage of market opportunities.*
