

FALCK RENEWABLES S.P.A: LAUNCH OF A NEW WIND FARM IN SCOTLAND

- **Set in Assel Valley, in the South West of Scotland, the new wind farm represents the third entered into operation in the UK in 2016, after Kingsburn (Scotland) and Spaldington (England)**
- **Total installed capacity of Falck Renewables in the United Kingdom rose to 377 MW**
- **The CEO, Toni Volpe: "Achieved objectives ahead of schedule"**

Milan, October 28, 2016 – Falck Renewables S.p.A announces that today it has introduced into service Assel Valley Wind Farm, located 5 km south of Girvan in South West Scotland (United Kingdom).

The plant employs ten N90/2500 wind turbines and has an installed capacity of 25 MW, generating approximately 84,000 MWh annually. The clean energy produced is the equivalent to the energy consumed by 20,500 homes and will save almost 36,000 tonnes of CO₂.

This brings Falck's installed capacity in Scotland to a total of 307 MW over 9 plants.

Confirming the attention directed by the Group to the local communities, the project has allocated support to a local Community Benefit Fund. The fund will provide grants to support activities that enhance the quality of life for local residents. A wide range of activities will be considered for funding, for example maintenance or refurbishment of community facilities.

Toni Volpe, CEO of Falck Renewables S.p.A. commented: *"With the launch of the Assel Valley wind farm we reach, ahead of schedule, the goals that we set earlier this year. After today's opening and the recent openings of two other wind farms (Kingsburn in Scotland and Spaldington in England) our installed capacity in the UK, a country where today we have the largest presence, is 377 MW, and the goal is to achieve 413 MW within first quarter of next year. The strong relationship with the local communities continues. Assel Valley, as all our UK plants, will contribute to a Community Fund that will finance a number of relevant initiatives for the local community"*.

Falck Renewables S.p.A., a Falck Group Company listed on the Italian Stock Exchange in the STAR segment ("FKR.MI") develops, designs, builds and manages power production plants from renewable sources. It is active in Europe, with

FALCK RENEWABLES

installed capacity of 822 MW in 2016 (785 MW according to the IFRS 11 reclassification) and produces energy in Italy, United Kingdom, Spain and France worth more than two billion kWh per year, using wind power, solar power, biomass and waste-to-energy technologies.
